SW Developer Embedded

Description Software Developer Embedded Systems

Your responsibility is to develop low level embedded solutions which are interacting with embedded boards from suppliers. You are a result-oriented engineer that enjoys to work with technical challenges and has the capability to think and drive towards creative solutions. You will be involved in the whole design process from architecture, specification, development, implementation and testing of these low level embedded systems. Your responsibilities:

• Analysis of software requirements;
• Technical design of the software based on the translated requirements;
• Implementation of the design in C/C++ and Python;
• Testing of the developed software based on the specifications and create Unit tests for low level application layer software;
• Integration of different software modules;
• Troubleshooting and supporting the relevant design groups on software issues;
• Documentation.

Requirements

• BSc or MSc Computer Sciences, Informatics, Embedded Systems, Electronics, Controls Systems or comparable.
• At least 2 years (for senior 7+ yrs) of experience in a relevant technical software development environment with software development, realization, implementation, testing and integration.
• Relevant experience in development platforms (Linux, windows, VxWorks, QNX, Solaris) and embedded/real-time applications;
• Proficient in C/C++ and Python programming, experience with Object Oriented software development;
• Experience with software configuration management tools like ClearCase, Subversion, GIT, or Synergy;
• Demonstrable knowledge or expertise with different design methods and techniques such as Agile/Scrum, MDD/TDD, real-time, object-oriented, and UML;
• Knowledge in or experience with hardware platforms.

Company profile

As (senior) software developer Embedded Systems you will be responsible for the specification, design and integration of low level software functions for controlling high speed and nanometer accurate motion control equipment for the semiconductor industry.

Client

The position of (senior) software developer Embedded Systems is within the Embedded Software department, world's leading manufacturer of complex lithography machines for the semiconductor industry. The main focus of the department is related to intelligent embedded solutions related to accurate motion control, time driven applications, digital signal and/or data processing systems.

Xelvin offers you Dutch employment contract. We also offer you these benefits:

• Good competitive salary;
• Pension scheme, no waiting days are served in case of incapacity of work, accident insurance, supplementary occupational disability insurance and a collective health insurance;
• Travel allowance, Holiday pay, 24 vacation days and shift allowance;
• We support your relocation to the Netherlands including your working permit, provide a personal development program and introduce you into our large expat community with several social events a year.

Vacancy number: WBS4373916/31-08-2016

Hands-on Senior .NET/Sitecore Architect

Are you the Senior .NET/Sitecore Architect that will amaze us with his/her extensive knowledge and all-seeing critical eye?

At Lukkien you are responsible for designing the architecture of the technical landscape of the websites that are created by our Digital Department, and for developing the back-end and CMS of these websites. In this senior position, you will get the opportunity to advance to a Team Lead / Domain Architect position.

The projects that you will be working on will offer an interesting mix of long and short-term projects, larger and smaller clients and corporate and creative websites. These websites are made available through various channels, such as PC, mobile and tablet, and often attract a large amount of visitors. With your creative and detailed approach you will create clear technical structures and clean code for each website.

Lukkien is Sitecore Gold Implementation Partner and always stays up to date with latest development techniques. We highly value sharing this knowledge between colleagues. As

a senior developer you should be able to clearly communicate your knowledge and explain your insights to your team members in order to guide our junior and medior developers.

With your team you will operate according to the Scrum methodology and you will be involved in the entire development process of each website, from design to completion. During this process, you will work closely together with our designers, testers and front-end developers. Together you will make sure each and every aspect is represented within the final product. With your team, you will continuously push the limits to reach the highest goals and exceed the highest expectations.

Who are you?
-    Minimum of 5 years working experience with .NET
-    Minimum of 5 years working experience developing websites and web applications on a large scale
-    Familiar with the Sitecore CMS
-    Preferably in possession of a Sitecore Certificate
-    Familiar with ASP.NET Web Forms, ASP.NET MVC 3 en/ of 4, C#, SQL Server, Lucene.NET, IIS 7+
-    Familiarity with DMS is preferred
-    Familiarity with the Scrum methodology is preferred
-    You are our ideal candidate if you have a solid knowledge of the basic concepts of programming, in particular Object Oriented Programming (OO)

-    Hard worker
-    Real team player
-    Comfortable in a dynamic work environment
-    Quality minded
-    Take responsibility for your work and the results

Lukkien is looking for you if you are pragmatic, inquisitive and interested in all developments of the multimedia branch. Furthermore, you feel at home in a company that engages all aspects of marketing communication.

What's in it for you?
- A job at a fast-growing cross-media company
- An inspiring work environment, consisting of many different disciplines all under one roof
- Competitive wages
- 25 vacation days
- Covered travel expenses
- Pension Plan
- Collective Health Insurance
- Study opportunities
- Large, appealing clients (take a look at our Portfolio)
- Informal atmosphere
- Healthy and tasty lunch in our restaurant
- Lukkien Gym
- New inspiration provided by our own Campus Talks

Digital Department
Emerce 100 has listed Lukkien among the top 15 internet bureaus of the Netherlands. Our Digital Department develops an extensive array of online platforms for large A-list clients, from websites and web shops to e-learning tools. As on- and offline are no longer separate worlds, our Digital specialists work closely together with our colleagues from the Audiovisual and Photography & Graphic Design departments. This allows us to always provide our clients with the best possible cross-media solutions. Furthermore,

Do you recognize yourself in this profile and is it exactly what you have been looking for? Apply immediately by sending us your resume, motivation and some sample code that represents your work and your level of quality to sollicitatie@lukkien.com.
or call us: tel. +31318698011

Vacancy number: WBS4293316/25-08-2016

Senior Java Developer

Do you have the right Java skills to create a brand new software application, using innovative technologies and ideas?

You are responsible for developing the back-end of a brand new software application for leading marketing companies on an international level.

You will play a vital role in setting up the technical roadmap of a highly available, fault-tolerant and scalable platform. REST API's will

play a crucial part. You will carefully guard the technical architecture of the application and will be closely involved in the further innovation of this platform. With your creative and detailed approach you will continuously create clear technical structures and clean code.

Lukkien always stays up to date with the latest development techniques and we highly value sharing this knowledge amongst colleagues. Therefore, as a senior developer you should be able to communicate clearly, share your knowledge and explain your insights to your team members and other colleagues.

With your multidisciplinary team you will operate according to the Scrum methodology and you will be involved in the entire development process of the software application. Your input will be substantial, because of the small size of the team and your extensive Java knowledge. You will work closely together with our front-end developers and the representatives of our client. Together you will make sure each and every aspect is represented within the final product. With your team, you will continuously push the limits to reach the highest goals and exceed the highest expectations.

Who are you?
-    Minimum of 5 years working experience with Java
-    Familiar with Spring and Java EE Frameworks and with Build Frameworks (Maven/Gradle/Ant)
-    Proven experience with scalable (Cloud) platforms, Cloud Hosting, NoSQL Databases, REST (JSON)
-    Proven experience with Web Applications, Web Services and Service Oriented Architectures
-    Familiarity with the Scrum/Agile methodologies is preferred
-    You are our ideal candidate if you are also experienced with Front-end development, writing Unit & Integration Tests and with Enterprise Design Patterns

-    Hard worker
-    Real team player
-    Comfortable in a dynamic work environment
-    Quality minded

-    Take responsibility for your work and the results

What's in it for you?
-    A job at a fast-growing cross-media company
-    An inspiring work environment, consisting of many different disciplines all under one roof
-    Competitive wages
-    25 vacation days
-    Covered travel expenses
-    Pension Plan
-    Collective Health Insurance
-    Study opportunities
-    Large, appealing clients (take a look at our Portfolio)
-    Informal atmosphere
-    Healthy and tasty lunch in our restaurant
-    Lukkien Gym
-    New inspiration provided by our own Campus Talks
-    End-of-the-week drinks at our Lukkien Bar every Friday

Where will you be working?
About Lukkien
Lukkien is the communication campus of the Netherlands, because all our disciplines are housed under one roof, which allows us to operate as a full-scale cross-media company. Every day over 225 employees, divided over the departments Digital, Photography & Graphic Design, Audiovisual and CGI, work for an appealing array of diverse and large clients. At Lukkien, the customer is always our nr. 1 concern. We focus all of our energy on achieving the best possible results and celebrate our achievements together.

Ready to apply or looking for more information?
Do you recognize yourself in this profile and is it exactly what you have been looking for? Apply immediately by sending us your resume, a letter of motivation and some sample code that represents your work and your level of quality to sollicitatie@lukkien.com .

Would you like some more information before applying? Feel free to contact our Corporate

Recruitment Team via tel. +31318698011.

Lukkien is Django Oscar and Wagtail Contributor and always stays up to date with the latest development techniques. We highly value sharing this knowledge between colleagues. As a senior developer you should be able to clearly communicate your knowledge and explain your insights to your team members in order to guide our junior and medior developers.

With your team you will operate according to the Scrum methodology and you will be involved in the entire development process of each website, from design to completion. During this process, you will work together closely with our designers, testers and front-end developers. Together you will make sure each and every aspect is represented within the final product. With your team, you will continuously push the limits to reach the highest goals and exceed the highest expectations.

Who are you?
- Minimum of 5 years working experience with Python and Django
- Minimum of 5 years working experience developing websites and web applications on a large scale
- Familiar with mySQL, PostgreSQL, memcached, nginx and uWSGi
- Familiarity with the Scrum methodology is preferred
- You are our ideal candidate if you are also experienced in Front-end Programming (HTML/CSS, JavaScript), Continuous Integration, Pair Programming, Unit Testing or even TDD
- Hard worker
- Real team player
- Comfortable in a dynamic work environment
- Quality minded
- Take responsibility for your work and the results

Lukkien is looking for you if you are pragmatic, inquisitive and interested in all developments of the multimedia branch. Furthermore, you feel at home in a company that engages all aspects of marketing communication.
What's in it for you?
- A job at a fast-growing cross-media company
- An inspiring work environment, consisting of many different disciplines all under one roof
- Competitive wages
- 25 vacation days
- Covered travel expenses
- Pension Plan
- Collective Health Insurance
- Study opportunities
- Large, appealing clients (take a look at our Portfolio)
- Informal atmosphere
- Healthy and tasty lunch in our restaurant
- Lukkien Gym
- New inspiration provided by our own Campus Talks
- End-of-the-week drinks at our Lukkien Bar every Friday

Emerce 100 has listed Lukkien among the top 15 internet bureaus of the Netherlands. Our Digital Department develops an extensive array of online platforms for large A-list clients, from websites and web shops to e-learning tools. As on- and offline are no longer separate worlds, our Digital specialists work closely together with our colleagues from the Audiovisual and Photography & Graphic Design departments. This allows us to always provide our clients with the best possible cross-media solutions. Furthermore, Lukkien is Certified Scrum Master, Django Wagtail and Oscar Contributor and Sitecore Gold Implementation Partner.

Do you recognize yourself in this profile and is it exactly what you have been looking for? Apply immediately by sending us your resume, a letter of motivation and some sample code that represents your work and your level of quality to sollicitatie@lukkien.com.

Would you like some more information before applying? Feel free to contact our Corporate Recruitment Team via tel. +31318698011.

Vacancy number: WBS4291316/25-08-2016

Senior PHP Developer

Do you have the PHP skills to create a perfect connection between our websites and applications and our PIM System?

What will you be working on?
As a Senior PHP Developer at Lukkien, you will be responsible for integrating our Product Information Management (PIM) System into the websites, web shops and other applications that are created by our Digital Department. Our PIM system provides a central source of information for all kinds of product data, such as names, descriptions, price tags, translations and much more. This information is all stored and managed in our PIM system and is made available through various channels. In the development process of these applications, you will be responsible for developing the implementations and configurations of and the links to our PIM system.

Your extensive knowledge allows you to understand the entire development landscape of your projects, which enables you to make the right choices while implementing the PIM. Your technical approach is creative and precise, and always focused on creating clear and clean structures. Furthermore, you are able to work together within a team and to share and explain your valuable knowledge with your teammates. And most importantly, your thinking process is guided by possibilities and not by impossibilities. After all, we are a creative company.

Who are you?

- Minimum of 5 years working experience with PHP, MySQL and Git
- Minimum of 5 years working experience with developing websites and web applications on a large scale
- Familiar with Zend Framework and Linux
- Fully acquainted with Object Oriented Programming and Unit Testing
- Familiarity with the Scrum methodology is preferred
- Familiarity with Document Based Databases like CouchDB and Queuing Mechanisms is preferred
- You are our ideal candidate if you are also experienced in Front-end Development, Continuous Integration, Pair Programming and TDD

- Hard worker
- Real team player
- Comfortable in a dynamic work environment
- Quality minded
- Take responsibility for your work and the results

Lukkien is looking for you if you are pragmatic, inquisitive and interested in all developments of the multimedia branch. Furthermore, you feel at home in a company that engages all aspects of marketing communication.

What's in it for you?
- A job at a fast-growing cross-media company
- An inspiring work environment, consisting of many different disciplines all under one roof
- Competitive wages
- 25 vacation days
- Covered travel expenses
- Pension Plan
- Collective Health Insurance
- Study opportunities
- Large, appealing clients (take a look at our portfolio)
- Informal atmosphere
- Healthy and tasty lunch options in our restaurant
- Lukkien Gym
- New inspiration provided by our own Campus Talks
- End-of-the-week drinks at our Lukkien Bar every Friday

Where will you be working?
About Lukkien
Lukkien is the communication campus of the Netherlands, because all our disciplines are housed under one roof, which allows us to operate as a full-scale cross-media company. Every day over 225 employees, divided over the departments Digital, Photography & Graphic Design, Audiovisual and CGI, work for an appealing array of diverse and large clients. At Lukkien, the customer is always our nr. 1 focus. We focus all our energy on achieving the best possible results and celebrate our achievements together.

Do you recognize yourself in this profile and is it exactly what you have been looking for? Apply immediately by sending us your resume, a letter of motivation and some sample code that represents your work and your level of quality to sollicitatie@lukkien.com .

Would you like some more information before applying? Feel free to contact our Corporate Recruitment Team via tel. +31 (0)318 69 80 11.

Software Developer

Software Developer Ref: MS-JDS-SWD-201605 Title: Software developer Based at: MetaSensing BV, Noordwijk ZH, The Netherlands. Job purpose: Develop and implement C++ and C# processing and visualization software
Job duties: • To implement real-time visualization (2D, 3D) of radar processed outputs • To write control programs and interfaces for radar modules using multi-threading • To design and implement the Graphical User Interfaces (GUI) for the different radars • To mantain current internal software Company description: MetaSensing BV is a Dutch SME which provides radar solutions. MetaSensing designs, manufactures and operates radar sensors (airborne SAR and ground-based) at different frequencies for a large variety of applications. MetaSensing's sensors are compact, light-weight and high resolution providing the most cost effective solutions for detection, mapping, surveillance

and imaging to governments, universities and commercial companies. If interested, please send an email with your CV and cover letter to info@metasensing.com with subject Ref: MS-JDS-SWD-201605.
Strong knowledge of programming languages (C, C++, C#, .NET, etc.) - Strong knowledge of graphical environments (DirectX, OpenGL, etc.) - Good capability of working in an international environment and in a team - Good knowledge of English for the working environment - Min. 4 years experience

Please apply to: info@metasensing.com

Vacancy number: WBS4245816/23-08-2016

Internal Application Engineer

• Develops a general portfolio of ARM based boards driving a range of display and touch combinations with the necessary Linux driver support in close co-operation with a range of mainly China based component suppliers
• Supports customers who are designing systems based on the developed ARM/Display/Touch portfolio
• Evaluates and solves any issues with customer systems both at design stage and RMA in close co-operation with China based component suppliers
• Develops specific ARM/Display/Touch solutions by studying customer requirements; researching and testing manufacturing and assembly methods and materials
• Assures product quality by designing testing methods; testing finished products and system capabilities
• Provides engineering information by answering questions and requests
• Maintains product and company reputation by complying with regulations
• Maintains and develops relationships with new and current China based ARM board, Display and Touchscreen suppliers
• Maintains professional and technical knowledge by attending educational workshops; reviewing professional publications; establishing personal networks; participating in professional societies
• Contributes to team effort by accomplishing related results as needed
Internal Application Engineer Skills and Qualifications:

Electronic Systems, Electronics Troubleshooting, Electronic Testing Design, Experience with Linux on ARM, Experience with Embedded Systems, Displays and Touchscreen applications, Project Management, Quality Focus, Customer Focus, Attention to Detail, Emphasizing Excellence, Innovation

Other requirements for this position
• At least three years of relevant experience in developing Linux/ ARM based systems including touch screen, display and power supply
• Extensive communication experience with companies in China
• Prepared to move to a location within daily travel distance from Haaksbergen, The Netherlands
• Fluent in the (technical) Mandarin language
• Fluent in the English language

Vacancy number: WBS3801916/21-07-2016

MES engineer at ProLeiT

The ProLeiT Netherlands HQ is based in Enschede where most of the engineering is done. In 2014 we opened an office in Amsterdam where we have situated our sales and marketing department. As an industrial automation company we develop and supply automation solutions to global players from the brewing, beverage, food, bakery, dairy, pharmaceutical/biopharmaceutical and chemical industries worldwide. Our process control systems (PCS) and manufacturing execution systems (MES) are used in over 1,600 production plants in more than 100 countries.
Job description

As a MES Engineer at ProLeiT you will develop technical solutions for complex industrial automation projects.
You are responsible for the technical specifications / technical design and you have a responsible role in the engineering, commissioning and operator training of our MES solution.
You will develop the solutions in close cooperation with the customer for an optimal result. A challenging and multifaceted and varied varied job.
As a MES engineer at ProLeiT you are part of a multidisciplinary team. The Plant iT software offers integrated software for MES / MOM applications including reporting, tracking and tracing, preparation, production planning and logistics registration. The Process control and HMI functionality is an integrated part of our software solution.
job requirements

☐ Graduated from Higher technical education (Ba.Sc / M.Sc) in a relevant field of expertise i.e. : Industrial Automation, Applied Physics,

Electrical Engineering, Computer Science, IT or ICT training
☐ Programming knowledge and interest is a must. (Transact-SQL and higher programming languages C#, .NET, WPF)
☐ Experience with project work
☐ Experience with SQL-databases
☐ You can translate different business processes into an automated MES solution.
☐ Knowledge of the underlaying production processes is an advantage
☐ Knowledge of networks is an advantage
☐ Willing to travel both nationally and internationally
☐ Good in having an independent role
☐ Excellent communication skills
☐ Strong analytical skills
Tasks
☐ You write functional specifications.
☐ You engineer and commission MES applications.
☐ You write FAT and SAT protocols.
☐ You support your colleagues in the preparation of calculations.
☐ You communicate closely with the customer.
☐ The possibility exists that you work abroad each year for 2 to 3 weeks

Vacancy number: WBS3074316/13-06-2016

Experienced software engineers

Connectis is a mature start-up with a passion for software development. We are looking for genuine engineers; craftsman that share our drive. You will work on our own software-as-a-service platform. We reach millions of end-users and are mission critical for many of our high-profile customers.

Connectis develops software for online identification, authentication and authorization. An exciting field, which often hits the news headlines.

Our products are the key to 'SaaS' and 'cloud' applications. This market is developing rapidly and Connectis is growing with it.

Connectis is a flat, agile organization. Everyone participates and has a 'hands-on' mentality. We are honest, ambitious and there is a positive atmosphere.

Connectis is located within walking distance of Rotterdam Central Station.

As a software developer you design and build the Connectis™ platform for federated identity management. Your work will reach millions of end-users and is mission critical for many of our high-profile customers. You will work within an agile team, with a positive 'can do' mentality.

You must become an expert on secure programing. We also expect you to specialize in one or more other areas of expertise. You will educate your colleagues and consult our customers.
We have various exciting projects and always strive to push the envelope with our work.

Product development:
- Create highly secure solutions within our area of expertise.
- Develop and maintain reusable software components.
- Code review on security vulnerabilities and "Clean Code".

Knowledge development:
- Become an expert on one or more standards for identity management, such as SAML, XACML, OAuth, OpenID, WS-Trust and SCIM.
- Attend, prepare and present monthly knowledge sessions with your colleagues.
- Support and educate junior software developers and help them to improve their skills.

Minimum requirements:
- At least 3 years of experience as a full-time software developer.
- University-level thinking and work experience.
- Expertise in Java is preferred.
Desired experience
- Extensive knowledge of the Linux platform.
- Experience with at least two of the following fields:
> Test Driven Development and Agile/Scrum development.

> Web-based applications, including XML/SOAP en REST.
> Standards in the field of (federative) identity management such as SAML, XACML, OAuth, OpenID , WS-Trust, Kerberos, Information Cards, X509 certificates or LDAP.
> Design and management of SQL databases.

- Experience with PostgreSQL is preferred

- Passion for software development.
- Enjoy sharing knowledge with (junior) software developers.
- Good communication skills.
- An education or dissertation in exact sciences such as information technology, mathematics, physics, econometrics, engineering or similar.
- Internationally recognized certificate in the field of software development, system administration and/or information security.

PLC/Scada Engineer

As a PLC/SCADA Engineer, you will work at IHC Systems. This organisation develops and supplies standard and custom-built solutions for the efficient operation of dredgers and related vessels. These are deployed in the marine dredging industry and for the mining of alluvial and deep-sea resources. The electrical, electronic and IT systems involve anything from robust sensors to stand-alone and/or integrated systems for service, presentation, automation, hydrography and DP/DT, supported by training simulators. Global life-cycle support - either remote or on location - guarantees durability and reliability. The company, which has paved the way in its sectors for over 40 years, is based in Sliedrecht and employs over 100 people.
As a PLC/SCADA Engineer, you will work in the automation and control of dredgers and related equipment. You will be responsible for designing, coding and testing PLC and SCADA software for monitoring, processing, measuring and controlling systems for dredging components. The PLC/SCADA Engineer will work as part of a project team and be supervised by the Project Engineer and the

PLC/SCADA Lead Engineer. Your role will also include designing and configuring user interfaces relating to the dredging process using SCADA packages. In addition, it will involve drawing up functional specifications and writing software for SCADA with PLC and other systems. You will also set up the overall system configuration and testing of applications using a simulator.

To be eligible for the role of PLC/SCADA Engineer, you must have the following:
• an ability to think and work at a higher professional (HBO) level
• demonstrable experience with and/or affinity for measuring and control technology, and process automation
• knowledge of and experience with designing, programming and coding PLCs with the relevant packages, and knowledge of the CIMPLICITY SCADA package
• (some) knowledge of process management systems
• the ability to read drawings (electric, pneumatic and hydraulic)
• the idea of working in project teams appeals to you
• good communication skills
• analytical ability and can show initiative
• good command of English, both written and spoken.
Are you interested in the position of PLC/SCADA Engineer and do you recognise yourself in the job description? Please respond directly through our website: www.royalihc.com/careers or by using the apply button.

For more information about Royal IHC, the vacancy and the application process, please visit www.royalihc.com or call the Staffing department on +31 (0)88-015 4444. Mention EURES as your source in your application!!

 Vacancy number WBS 2088216

Dataset Coordinator

Within the PACCAR Inc. DAF Engine Development is the center of competence for

Engine Development. In our state-of-art engine development center we develop engine families for the future regulations. Our engines and trucks are best of class products in the transportation world being always driven by providing environmentally friendly products with best cost-effectiveness and highest reliability for our customers. As a globally working company we do offer optimal opportunities to contribute to our success in a multicultural team.

The Engine Control Systems department is responsible for the development of the Engine Control Unit, both software and hardware, of PACCAR engines. The department is divided in three groups: Software Definition, Software Engineering and Hardware. The candidate will be working in the Software Definition group.

To support the increase in projects and technology development, we are looking for a experienced Dataset Coordinator to strengthen our creative and innovative software definition team in the ever fast changing environment.

The Dataset Coordinator is responsible for planning, coordination, verification and releasing of datasets for Engine Management and Aftertreatment Management Systems. Datasets consist of software, calibration data and description files and are compiled based upon input from calibration owners. You delegate tasks to dataset engineers and plan dataset delivery schedules based on project plans. You frequently deliberate with project lead engineers and are in close contact with the stakeholders to verify the contents of the datasets.

As a Dataset Coordinator you will develop strategic plans for dataset management processes and tooling. You will apply lean six sigma techniques to continuously improve your processes.

In this position you will report to the Supervisor of the Software Definition group and functionally to the project lead engineer(s).

Profile
 - Technical education on Bachelor of Master level with a specialisation in Mechanical or Automotive Engineering

 - Several years of experience with datasets for embedded automotive software applications
 - Several years of experience in a coordination role, working in projects and delegating work to engineers
 - Experience with calibration processes for embedded automotive software applications
 - Experience with process optimisation and lean six sigma techniques
 - Knowledge of embedded software design processes (according the V-cycle)
 - Good English skills are mandatory combined with willingness to learn Dutch.

 We offer
 DAF offers an inspiring and challenging work environment where safety comes first. You don't just choose for a job, you choose for a career at DAF. An appealing and independent position with excellent benefits, a good working environment and excellent career and development opportunities in an international organization, based in Eindhoven. Drive your career, join DAF!

Vacancy number: 1424915/18-03-2015

Software designer engineer

 If you enjoy software development and would like to expand your skill set and see your programming efforts through to commercial deliverables, then this is an exciting opportunity for you.

 Job Mission
 In close co-operation with colleagues from software and other disciplines (mechatronics, optics, electronics) the software engineer is a member of a multi-disciplinary team. In these teams software plays an important role for the success of this company. Since software is an integrating competency, it is an essential added value. You will be involved at all stages of specifying, designing, testing and integrating the advanced software for use in our world-leading products.
 Our people make up a dynamic, fast-moving, entrepreneurial community. An advantage that leads to personal growth, professional development, and peer-group recognition. It's

also an environment that requires free-flowing teamwork, so that people can develop elegant solutions simply by talking to colleagues, and using each other's unique area of expertise.

Job Description
The software engineer is responsible for creating clear specifications, making the efficient design choices and to 'make it happen' by also implementing the design. Customer satisfaction is the number one driver for this company and thus for every software engineer.

Education
Bachelor or Master level with an education in Embedded Systems, Computer Science, Informatics, Mechatronics, Mathematics, Physics, Engineering or comparable.

Experience
Demonstrable expertise in C, C++, object oriented programming, Unix/Linux, Solaris, realtime, Python, MATLAB and software configuration management (ClearCase)

Personal skills
• Pro-active, self-starter, decisive, takes ownership
• Strong communicator with a pragmatic attitude.
• Real team player with quality orientation.
• Good knowledge of English.

Context of the position
The sector Development & Engineering (D&E) is responsible for the development of the products. Within this sector the department Machine Control & Infrastructure (MCI) is responsible for the design, implementation and maintenance of the software of the complex lithographic machines. This company creates high tech machines; software engineers from MCI are facing several aspects of motion control, production control, data management and Interface control. A huge code base is maintained and under strict configuration management to provide maximum commonality between different machine types. Interested?

Vacancy number: 1424315/18-03-2015

Embedded Software Function Engineer

Functie Beschrijving   Does a unique career in automotive engineering sound appealing?
Do you have a passion for excellence?
Is checking and double-checking your second nature?
Job description:
• The embedded SW-team is part of our R&D department for automatic transmissions, hybrid and full electric powertrains. The embedded SW-team is responsible for the embedded software of our transmission control units (TCU's). Increasingly more features
are being implemented in SW.
• You will be responsible for the overall architecture, overall design and implementation of
software functionality, including automated test set-up.
• You will be the first point of contact for software related issues.
• Key words: Embedded, Lint, MISRA, Subversion, Functional safety
Profile:
• University degree in applicable field or equivalent through proven experience.
• 5-7 years experience in embedded (real-time) software, automotive is considered a plus.
• Experience in a hard real-time embedded environment.
• Knowledge of formal design methods, design for testability.
• Excellent, hands-on knowledge of embedded 'C', and recent micro controller architectures.
• Ability to work with electronic test equipment to trace hardware / software integration
problems.
Offer:
• You will join a respected, fast growing company with an outspoken international orientation in the challenging world of automotive industry.
• We offer a dynamic work environment, the chance to grow within the company and to develop your competences in new technologies.
• You can count on motivated colleagues, professional space for creativity and initiative

and short communication lines.
• We provide a congestion-free access and an attractive salary package with all kinds of fringe benefits.

Vacancy number: 1424015/18-03-2015

Application Specialist

About Liteq
Applications like Mobile, Cloud and Internet of Things drive electronic devices to be smaller, thinner, cheaper, with lower power consumption and latency, and a higher bandwidth. The packaging of microchips has a profound contribution to those characteristics. Liteq is a company dedicated to lithography solutions for Advanced Packaging of microchips to further enable the mentioned applications. Our solution is based on a high productivity stepper with high flexibility for the user in order to support multiple packaging platforms with optimal cost of ownership.

About the context
It's Liteq's philosophy to design a system focusing on core competences and acquiring standard state of the art solutions where possible. This leads to low cost and high flexibility in the design, and also allows for a small core team to work on the system further reducing the cost. The system is designed to have minimal maintenance resulting in maximum availability of the tool for the customer to run its production. Liteq will design and build a Lithography stepper for the Advanced Packaging market. The Advanced Packaging is a step in the sequence to build semiconductors. This technology will become a mainstream production technology in order to increase chip performance. The strategy within Liteq is to create and own the complete design of the system. This will be done in cooperation with the wide range of suppliers. In order to manage this process Liteq wants to build her own expertise in various engineering disciplines to manage the design and build of the system. Some of the specific technology competences will be concentrated in the own resources of Liteq. One of these competencies is Lithography application.

About your mission
As an application specialist, you:

☐ Understand the IC back-end processing environment at customers and build the imaging, lithography and resist competences for Liteq.
☐ Create and managing the wafer processing to support the development team, to qualify the system and to create collateral material.
☐ Define imaging qualification test procedures.
☐ Attract customers by performing convincing demo's.
☐ Support of beta customers in the field.

Application Specialist
About your role
☐ Wafer process development: defining and implementing a standard Liteq resist process, including setting up a process lab.
☐ Take ownership of imaging qualification procedures by ensuring test tools and equipment availability. Coordination between development and sales about type of test and specification
☐ Expose wafers and report back to development on measured results. Provide clear information on improvements to development
☐ Document results; imaging and metrology.
☐ Support sales to generate sales collateral and proof-data.
☐ Creating and maintaining documentation.

About you
☐ MSc Physics / Chemical engineering
☐ >5 years in a lithography environment (preferably projection systems)
☐ Extensive experience with resist processes (thick resist processes are regarded a pro)
☐ Experienced to work with various fab tools (o.a. SEM, metrology tools, etc.)
☐ Preferable also experience in the IC back-end processes
☐ Good communicative skills
☐ Analytical
☐ Team player
☐ Self-starter

Vacancy number: 1049916/25-02-2016

System Engineer

About Liteq
Applications like Mobile, Cloud and Internet of Things drive electronic devices to be smaller,

thinner, cheaper, with lower power consumption and latency, and a higher bandwidth. The packaging of microchips has a profound contribution to those characteristics. Liteq is a company dedicated to lithography solutions for Advanced Packaging of microchips to further enable the mentioned applications. Our solution is based on a high productivity stepper with high flexibility for the user in order to support multiple packaging platforms with optimal cost of ownership.

About the context

It's Liteq's philosophy to design a system focusing on core competences and acquiring standard state of the art solutions where possible. This leads to low cost and high flexibility in the design, and also allows for a small core team to work on the system further reducing the cost. The system is designed to have minimal maintenance resulting in maximum availability of the tool for the customer to run its production. Liteq will design and build a Lithography stepper for the Advanced Packaging market. The Advanced Packaging is a step in the sequence to build semiconductors. This technology will become a mainstream production technology in order to increase chip performance. The strategy within Liteq is to create and own the complete design of the system. This will be done in cooperation with the wide range of suppliers. In order to manage this process Liteq wants to build her own expertise in various engineering disciplines to manage the design and build of the system. Some of the specific technology competences will be concentrated in the own resources of Liteq. One of these competencies is System engineering.

About your mission
☐ Support in defining the system set-up and system qualification test procedures.
☐ Help to build, assemble and qualify Prototypes.
☐ Specify supplied components and work closely with suppliers to come to a optimized total system.
☐ Work closely together with the system architect to materialize system concepts.
☐ Ensuring that the system is up and running and performing well and that information will be logged.
☐ Is able to operate and adjust and optimize the system. Work closely with the application engineer to tune the tool to optimally serve the application.

☐ Support beta customers in the field.

System Engineer

About your role
☐ Take ownership of the litho tool, keep the tool up and running and in a good shape.
☐ Keep track of the performance of the tool and provide clear information on improvements to stakeholders (suppliers, engineers, system architect, application engineer, etc.).
☐ Take ownership of the qualification procedures and test tools for qualifying the equipment.
☐ Support the application engineer to generate sales collateral and proof-data.
☐ Creating and maintaining documentation.

About you
☐ MSc Physics / Mechanical Engineering / Software or Electrical Engineering
☐ >5 years in a High Tech environment (preferably lithographic steppers systems) and tool testing experience
☐ Good communicative skills
☐ Analytical
☐ Team player
☐ Self-starter
☐ Diplomatic Attitude with a strong backbone
☐ Driven in architecture without losing sight of business proposition

In order to manage this process Liteq wants to build her own expertise in various engineering disciplines to manage the design and build of the system. Some of the specific technology competences will be concentrated in the own resources of Liteq. One of these competencies is product engineering.

About your mission
As a Product Engineer, you:
☐ Form the essential link between development and manufacturing of the tool. Serves as the first escalation path for manufacturing.
☐ Understand the challenge of acting between own Development and Out Sourced production.
☐ Prepare the introduction of new parts, components and systems in manufacturing.
☐ Make sure that assembly processes are well defined, documented and carried out.
☐ Make sure that the right criteria for incoming material are defined, documented and carried out.
☐ Controls that packing and shipping of the tool to customers is well defined, documented and carried out.
☐ Qualify and release the tool for shipment.
☐ Work closely together with the system engineer to further optimize the machine.
☐ Support beta customers in the field and later on the service organization.

About your role
☐ Take ownership of a good introduction of components and tools in manufacturing.
☐ Controls the manufacturing operation from an execution point of view.
☐ Responsible for the final testing and release of the system.
☐ Responsible for continuous improvement of processes and products.

☐ Enable and support the service organization and Beta-customers.

About you
• Bachelor or MSc Physics / Mechanical Engineering / Software or Electrical Engineering
• Experience; > 5 years in a High Tech environment (preferably lithographic steppers systems)
• Good communicative skills
• Analytical
• Team player with a strong back bone
• Self-starter
• You love complexity
• Stress Resistant

Vacancy number: 1048116/25-02-2016

Technical Customer Success Manager

We are a fun and fast growing Dutch start-up, consisting of 15 enthusiastic and international (Dutch, Croatian, Russian, Portuguese and Egyptian) people with a passion for technology and mobile.
To support further growth of the company, we are looking for an ambitious Customer Success Manager who has analytical, technical and commercial skills.

As a Customer Success Manager you will work closely with our sales team and product team.

Key tasks include but are not limited to the following:

Assist the sales team in the final closing stages.
Understand and explain features and benefits of the product as it relates to customer needs.
Build trusted relationships with customer's senior/strategic management, business and IT teams.
Guide the customer during the integration and setup of our technology.
Set up, track and optimize geo campaigns for our customers.

Train customer marketing teams who will use our service.

Provide first-line (technical) support.

Proactively identify opportunities for customers who require a more customised level of service or support delivered by a Plot Projects Premium Tier.

Drive Plot Projects contract retention and renewals by delivering a valued and high quality customer engagements

We are looking for
Experience in working in global / virtual teams is an advantage.

Preferably experience with SQL.

Strong communication skills.
Strong English language skills; other language skills desirable.

Passionate about the field of mobile (advertising) / location based marketing / technology.

Driven, self-motivated, and goal-oriented.

Dedicated and persistent.
Naturally optimistic and flexible.
Organized and thrives under pressure.
Technical/ analytical.
Bachelor IT

Vacancy number: WBS4327116

Medior Full Stack Developer

Plot Projects is market leader in Geofencing technologies. We've started developing geofencing solutions in 2011 and as Plot Projects was one of the first companies in the world to offer this technology, our current customers are spread out over the globe and include companies like Ryanair, Vodafone
Our target group ranges from app developers to brands, retailers and media agencies. We offer them a comprehensive Geofencing Solution consisting of:

– several plugins to add Geofencing to a third party app
(iOS/Android/Phonegap/Appcelerator/Xamarin),

– a dashboard to manage geofencing campaigns,
– extensive analytics
– an API.

We are looking for
We are looking for a developer with some experience who wants to work on complex and innovative systems on site at our office in Amsterdam. Our backend is built in Scala, but you'll have to be a full stack developer in order to work on our frontend, plugins, databases, API and Continuous Integration/Deployment pipeline as well.

We expect you to have the following:
At least 2 yrs of experience as a software developer with a strongly typed language such as Java or C# (required)

Experience with the Agile Methodology
Plus: Experience with a functional language such as Scala, Haskell, Clojure, F#

Plus: Experience with Continuous Integration/Continuous Delivery

Plus: Experience with API design
Plus: Experience with handling large volumes of data (high performance computing and/or big data)

Location: Amsterdam

Junior Full Stack Developer

Plot Projects is market leader in Geofencing technologies. We've started developing geofencing solutions in 2011 and as Plot Projects was one of the first companies in the world to offer this technology, our current customers are spread out over the globe and include companies like Ryanair, Vodafone

Our target group ranges from app developers to brands, retailers and media agencies. We offer them a comprehensive Geofencing Solution consisting of:
- several plugins to add Geofencing to a third party app
(iOS/Android/Phonegap/Appcelerator/Xamarin),
- a dashboard to manage geofencing campaigns,
- extensive analytics,

- an API.

We are a startup with a small (12 people) but international (Dutch, Croatian, Russian, Portuguese and Egyptian) team and are currently looking for a developer to complement our scrum team.

We are looking for
We are looking for a young (master / bachelor graduate in Computer Science or similar) developer who wants to work on complex and innovative systems. Our backend is built in Scala, but you'll have to be a full stack developer in order to work on our frontend, plugins, databases, API and Continuous Integration/Deployment pipeline as well.

We don't expect you to master all these fields of expertise yet; we train our developers internally and our developers are constantly mastering new fields of expertise on the job. This is why we are looking for someone who is smart, ambitious, studious and has strong analytical skills and who likes to attend and organize events to stay on top of new developments and share our knowledge.

All our developers have a lot of contact with our users, customers and potential customers. They contact us through our online support ticketing system or via questions on Stack Overflow.

Vacancy number: WBS4325716

Researcher Ground Penetrating

The work for this position is doing applied research. The contents of the work includes the analysis of an existing geophysical measurement system and find out possibilities to improve the system.
The specific tasks which are carried out here are:
• Analysis and interpretation of existing experimental radar data,
• Design and implementation of computer simulations,
• Design and implementation of experiments,

• Analysis and interpretation of the results of simulation and experiments, and
• Making proposals for further research.
Related additional tasks include tracking the developments in this field through literature, conferences etc.

Requirements:

1. Solid knowledge in the area of ground penetrating radar, particularly borehole radar.
2. Solid knowledge of electromagnetic wave theory.
3. Knowledge of and ability to independently use specialized experimental measurement equipment such as vector network analysers, spectrum analysers, digital oscilloscopes and pulse generators.
4. Knowledge of and ability to independently use specialized electromagnetic finite difference time domain solvers, preferably CST Microwave Studio.
5. Knowledge of the characteristics of the specific, unique product made by T&A and the environment it is applied in: for example, dipole and bow-tie antennas, reflectors, borehole dispersion phenomena, antenna loading methods.
6. Experience in the field of activities, such as of suppliers, manufacturers.
6. Education level: M.Sc/PhD
7. Languages: Fluent in English (speaking and writing), and Dutch (or willing to learn)

Back End Programmer

Are you someone who works independently and can communicate with a team? Do you like to play with new technology? Do you "live and breathe" the Web and have superior creative and innovative problem-solving skills? In that case, we want you to join our team immediately.

This position opening is for a full vertical-stack, backend developer. The developer will be responsible from the Virtual Machine and Container engine, up to the application level stack. This position entails migrating our current

infrastructure to a new design utilizing containerization(Docker) that is highly scalable, highly available, and resistant to failure. The work will involve preparing and containerizing our current set of microservices, so knowledge of how each of these services functions in a distributed environment is required. In addition to the devops work required, the candidate will need to optimize the microservice applications to operate in the new, distributed environment.

Required experience with: Highly scalable production deployments Docker AMQP Ruby on Rails React.js Node.js ffmpeg WebRTC Kurento AWS Kubernetes
